Sub: DETAILED TECHNICAL PROPOSAL FOR DEVELOPMENT OF ERP SOLUTION FOR PHARMACEUTICAL COMPANY

Dear Sir / Madam

Greetings from Softland India Limited! We would like to express our sincere appreciation for the valuable time you and your team invested during our meeting. It was a pleasure discussing your requirements for the development of ERP Solution and we thank you for your patient hearing and valuable feedback.

As a Total Solution provider with a wealth of experience, we are excited to submit our detailed Techno Commercial proposal for the design, development, and delivery of a solution that meets your specific requirements. The enclosed proposal outlines the scope of our understanding of your needs, our proposed solution, and the working of the system, along with the necessary compliance details.

We understand the importance of delivering a solution that exceeds your expectations and we are confident in our ability to do so. Our team of skilled developers specializes in the latest technologies, including Asp.Net, SQL Server, Flutter etc, and we are committed to delivering innovative and reliable solutions that meet your needs.

At Softland India, we take pride in our long-standing reputation for providing exceptional service to our clients. We are grateful for the opportunity to work with you and would be honoured to have you as our prestigious client. We are committed to ensuring your satisfaction by providing timely, cost-effective, and high-quality services.

Thank you once again for considering us for this project. If you have any further questions or would like to discuss the proposal in detail, please do not hesitate to contact us. We are eagerly awaiting the opportunity to work with you and deliver a solution that exceeds your expectations.

Thanking you and Best Regards

For Softland India Limited

K.Vinod

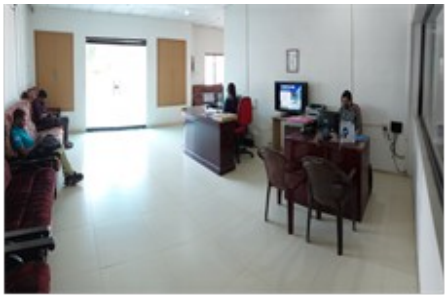
Executive Director

About Us

Softland India Ltd is a Public limited company established in 1995 by a group of IT Professionals. We provide embedded systems based IT solutions. We are pioneers & market leaders in developing and manufacturing non-PC hardware devices. We have vast experience in developing microprocessor-based devices. Our core strength is in the field of embedded solutions and we are mainly into providing of embedded solutions for the field automation. With an increasing strength of about 100 staff, we are able to achieve continuous success in all the field automation projects we take up.

Our Corporate Office, R&D and Factory are situated at Trivandrum city in Kerala. Our team of staff includes an excellent bunch of the 100 successfully trained staff of various departments. We have our service offices in various parts of INDIA. With this excellent network of service centers we are able to provide and unmatched service performance to our customer base. With over 30 Years of Embedded Expertise we are moving ahead to capture the World Market by providing most Innovative Field Automation Solution.

Softland India Limited embarked on its grand journey in the year 1995 and successfully moved across to as a TOTAL SOLUTION COMPANY with Concept to Reality Derivative Solutions for the World Market. Expanded from a single base in India to global foot prints in Srilanka, Philippines, Nepal, Ghana, Kenya, Gambia, Tanzania, Sierra Leone, Ethiopia and Middle East. Softland's Experience of 30 years in the industry in providing Total Solutions to international clients, bring an innovative approach & provide cost efficient solutions to projects and products undertake.



Credentials – Softland

1. ISO CERTIFIED
2. Registered With

Registrar of Companies	Electronics & Software Promotion Council
National Small & Medium Industries	District of Industries, Kerala

What We Do?

Softland India Limited is into the Sales & Support of Following solutions

1. Hardware Products – Palmtec, IPrintMarvel, Que WiFi, Smart Retrocon, LED Displays etc.
2. Software Solutions with Back end Web Applications & Mobile Applications including ERP, Van Sales Billing, Kitchen Order taking, Loyalty & Vehicle Entry Exit System, Customer Online Ordering Solutions etc.

Handheld PDA- [Embedded/ Android]

Palmtec is a handheld portable micro computer with in-built Thermal / Impact printer. Android model with touch screen & Embedded RTOS model with keypad,LCD are available.

- Bus Ticketing
- Utility Billing
- Chitfund Collection
- Zoo/ Park Ticketing
- Fine Collection
- Property Tax Collection
- Parking Lot
- Event Ticketing
- Shop Billing
- Microfinance

DynoQR- [Dynamic QR code scanner]

Dyno QR hepls customer to ensure clear visibility for making payment by displaying the dynamic qr code on grapical LCD

- Hospial
- Shop mall
- Restaurant
- Food Court
- Service Centers

CallerON - [Queue mangement solution]

A complete wireless hazzle free token display and queue mangement solution. Two part solution with a switch & display . additional option of token dispenser

- Food court
- Banks
- Quick service restorent
- Hospitals
- Public / Govt Center

Distribution Management - [Sales Force Automation]

An enlarged version with PC & Android Solution for Small & Medium Organisations for Order Booking, Billing, Payment Collection, Inventory Management, and Live Tracking, Navigation.

- Distributors
- Healthcare Supplies
- Logistics
- Oil and Gas Distribution
- Construction Materials
- Service Industry
- Textiles and Apparel
- FMCG

FSS- [Field sales sync]

New-gen field sales sync is an end to end solution for simplifying the business ensuring 360 degree visibility on field sales to customers and enhancing the effiency

- FMCG
- Jewellery
- Marketing agencies
- Pharma
- Courier and Logistics

Portable Printers- [Bluetooth, WiFi, Sms, Gprs]

Portable printers, available in 2" and 3" variants with thermal/ Dot matrix supports Bluetooth and WiFi connectivity, and are equipped with inbuilt rechargeable batteries.

- Bus Ticketing
- Utility Billing
- Chitfund Collection
- Zoo/ Park Ticketing
- Fine Collection
- Property Tax Collection
- Parking Lot Billing
- Event Ticketing
- Shop Billing
- Microfinance

IoT- [Internet Of Things]

WiFi/GPRS Enabled plug & play devices with integrated sensors for data transfer in smart homes & industries.

- Office
- Hospital
- Factories
- Logistics
- Home automation
- Cloud storage
- Hotals
- Resort

Call Q- [Number Calling System]

Call-Q is a standalone wireless token calling system. It integrates wireless keypads, LED displays, and dispensers to ensure smooth, organized, and efficient service operations.

- Hospitals
- Clinics & Labs
- Banks & Chit Funds
- E- Seva Kendra
- Service Centers
- Food Courts

TrakUrSale- [Sales Force Automation]

An simpler version of SIL SFA with PC & Android app for Small & Medium Organisations for Order Booking, Billing, Payment Collection, Inventory Management, and Live Tracking, Navigation.

- Distributors
- Healthcare Supplies
- Logistics
- Oil and Gas Distribution
- Construction Materials
- Service Industry
- Textiles and Apparel
- FMCG

Foodflash- [Smart order alerting system]

Samrt order alert system for food court .foodflash instanly notifies food customers on their phones when their order is ready

- Mall
- Events
- Beaches
- Offices
- Stadium
- Quick service restaurants(QRS)

1. EXECUTIVE SUMMARY

This proposal outlines a comprehensive ERP - based solution tailored for the client's pharmaceutical production workflow. The system integrates HRMS & Work force Management, Inventory Management, Procurement & Vendor Approval, Purchase Invoice Pre Approval & Quality Verification, Asset Management, Production Planning Recipe Management & Outsource Management, Sampling, Engineering Management, Finished Product & Packing Process, Sales Management, Accounting & Integration and Reporting & Synchronization modules to ensure traceability, compliance, and operational efficiency across all departments.

2. THE REQUIREMENT

The client is a pharmaceutical company engaged in the production of tablets and antioxidant oil derived from algae. To manage and digitalize its operations, the company requires an integrated software solution that can handle both production and administrative workflows.

2.1 Core Software Modules Required

- HRMS & Work force Management
- Inventory Management
- Procurement & Vendor Approval
- Purchase Invoice Pre Approval & Quality Verification
- Asset Management
- Production Planning Recipe Management & Outsource Management
- Sampling
- Engineering Management
- Finished Product & Packing Process
- Sales Management
- Accounting & Integration
- Reporting and Synchronization

2.2 Production Characteristics

- Origin: Products are derived from algae (seeds developed and prepared in-house).
- Production Duration: The production cycle is fixed at one month, regardless of output volume.

- Batch-wise Process: All operations are carried out batch-wise, necessitating precise tracking of input, output, and quality data for each batch.

3. OBJECTIVES

- To achieve full batch-wise traceability from raw material to finished product.
- To enable digital quality and process control at every stage.
- To automate approvals and compliance tracking.
- To integrate financial and operational data through Zoho Books.
- To enhance visibility and accountability across departments.

4. THE PROPOSED SOLUTION

A customized ERP - based production management system will be developed to manage and monitor every stage of production, inventory, HR, engineering, and accounts within a unified platform.

The proposed system will:

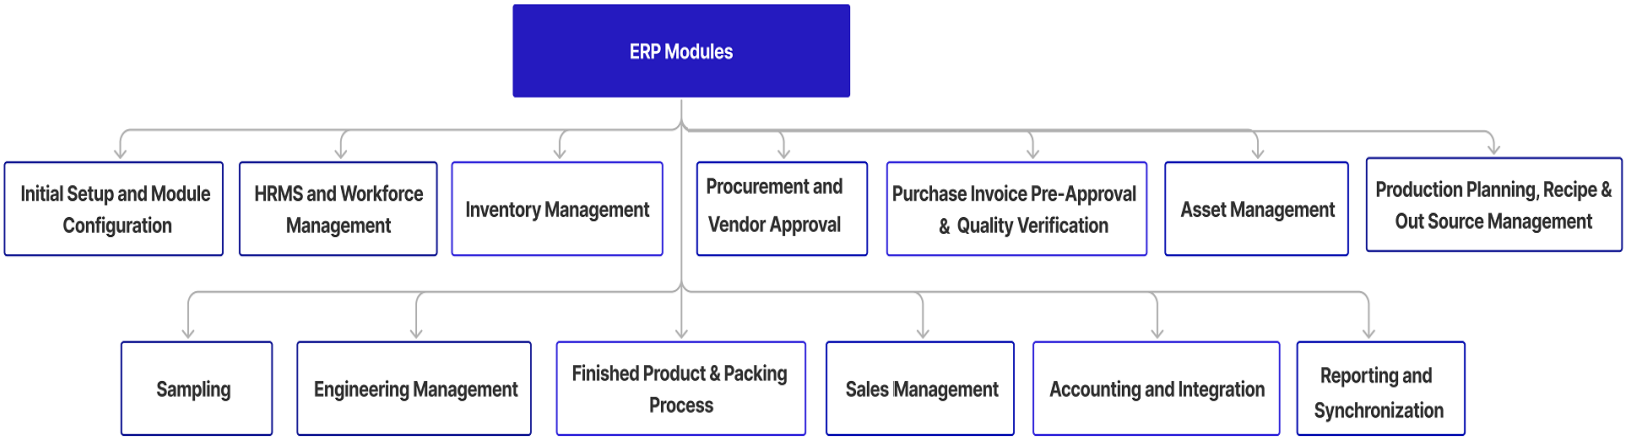
- Facilitate batch-wise tracking of all production processes.
- Allow real-time data entry and monitoring through an Android mobile application.
- Manage approvals at every operational stage (production, inventory, quality, etc.).
- Maintain integration with Zoho Books for real-time accounting operations.
- Support both in-house and outsourced processes with proper data validation and reconciliation.

5. COMPONENTS OF THE SOLUTION

5.1 Back end ERP Application

- Provides a centralized web-based interface for managing all business operations, including production, procurement, finance, and HR.
- Ensures role-based access control and real-time synchronization across departments for continuous workflow execution.

- Integrates all core modules into a unified platform.



5.2 Mobile Application Features

- Employees mark attendance; supervisors approve instantly.
- Scan QR/Barcode/NFC to view asset details and upload maintenance photos.
- Operators record checkpoints; supervisors approve in real time.
- Geo-tagging and timestamps ensure accuracy.
- Maintenance engineers log complaints and upload photos.
- Managers view summaries and approve transactions.

6. WORKING OF THE SOLUTION

The system digitizes and connects all stages of production through batch-wise traceability and integrated data management. This document details the functional workflow of the ERP solution for the pharmaceutical company. Each section outlines the process handled within the Web Application and corresponding actions or features in the Mobile Application, ensuring real-time synchronization, transparency, and efficient coordination between administrative and field operations.

1. Initial Setup and Module Configuration

Web Application

- Configure company, branches, departments, and user roles.
- Define Certificate of Acceptance (COA) to structure financial data and cost tracking.
- Create master data for items and raw materials, vendors, employees, and assets.
- Establish role-based access controls for each module.
- Set up integration with Zoho Books or Zoho Finance for real-time accounting synchronization.

Mobile Application

- Users log in securely using role-based credentials.
- Supervisors can review assigned roles, Check Point entry, and operational responsibilities.

2. HRMS and Workforce Management

Web Application

- Maintains employee data, attendance, payroll linkage, and manpower allocation for production batches.
- Enables shift planning and cost tracking per batch or process.

Mobile Application

- Employees mark attendance and submit shift entries using mobile devices.
- Supervisors approve attendance records and validate manpower usage in real time.

3. Inventory Management

Web Application

- Inventory module tracks multiple item categories of Raw Material and Consumables.
- Batch-wise monitoring ensures every stage of transformation is traceable and costed.
- System links each item to production batches and COA approvals for compliance.
- Supports Barcode, QR Code, and NFC Tag scanning for raw material tracking batch wise.
- Records stock issues, receipts, and adjustments directly from the production floor.

Mobile Application

- Not available.

4. Procurement and Vendor Approval

Web Application

- Register vendors and map them to specific raw materials using QA-defined COA templates.
- Each raw material includes a COA template with test parameters and permissible values.
- QA verifies vendor COA data, enters standard values, and uploads certificates for approval.
- Vendors for supplying the items are approved accordingly and then purchase orders can be issued.

Mobile Application

- Android user has the option to mark GRN receive status.

5. Purchase Invoice Pre-Approval and Quality Verification

Web Application

- Upon generating a Purchase Order, Vendors submit COA details for the batch before the physical delivery of goods.
- QA compares the vendor's batch COA with the predefined standard template during invoice pre-approval.
- If validated successfully, the invoice moves to pre-approved invoice status.
- GRN is allowed only after invoice pre-approval, post which materials enter inventory.

Mobile Application

- Upon receiving the raw materials, option will be available to mark GRN.

6. Asset Management

Web Application

- Centralized registration of all fixed and movable assets with details such as asset type, department, and location.
- Tracking and management of production machinery, laboratory instruments, IT equipment, and vehicles.
- Linking assets with Engineering and Production modules for real-time operational visibility.

- Complete lifecycle tracking of each asset from acquisition to disposal, including service and maintenance history.
- Support for QR Code, Barcode, and NFC Tag assignment for physical identification and system linkage.

Mobile Application

- Scan asset identifiers (QR Code, Barcode, or NFC Tag) to retrieve asset details instantly.
- Upload service-related attachments, such as before-and-after maintenance photos or remarks.

7. Production Planning, Recipe Management & Out Source Management

Web Application

1. Product Recipe and Process Mapping

- The Production Management Module defines each process: Fermentation →Crushing → Drying → Oil Extraction → Tablet Formation → Packing.
- A Recipe defines all ingredients and quantities for batch wise production of product.
- Each ingredient is mapped to its corresponding process step for complete traceability.

2. Process Flow Definition

- The production process is defined as: Raw Material → Semi-Finished 1 → Semi-Finished 2 → Finished Product.
- Each stage specifies the process name, inputs/outputs, time, manpower, and consumables.
- System supports both in-house and outsourced process tracking.
- The Recipe-Process mapping links materials, equipment, and time requirements to specific stages.

3. Resource Allocation

- Required assets, equipment, and human resources are allocated to each process.
- The system validates resource availability before batch approval.

4. Batch Planning

- Batch is created with defined product, quantity, and batch number

- Based on batch size, the system calculates required raw materials, manpower, and consumables.
- A Raw Material Request is automatically generated for inventory approval.

5. Quality Control and Check Point Settings

- Define checkpoints for each process stage — including both in-house and outsourced operations.
- Assign checkpoints for recording pH, temperature, moisture, density, color, etc.
- Batch-wise QC validation will be done after every stage before the next process begins.
- Store all test data under the batch for traceability and compliance.

6. Execution and Monitoring

- Operators enters Check points for each process (pH, temperature, duration) and update progress in real-time.
- Each completed stage updates batch status and moves automatically to the next stage.
- The system track actual vs planned yield and flags deviations.

7. Outsource Management

- Records the quantity of material sent for outsourcing in each batch(e.g., extrusion process).
- Calculates the theoretical yield in the lab for the expected output from the outsourced process.
- On return, compares the actual received quantity with the theoretical yield for validation.
- Performs quality checks on received outsourced products before batch acceptance.
- All outsourcing data and validation details are entered and managed through the Web Application.

8. Checkpoints and Quality Validation

- Defined checkpoints capture key parameters during execution.
- Sampling & Quality Control is done per stage to predict output quality before final completion.
- Stage wise outputs are recorded with batch numbers and yields.

Mobile Application

- Operators enter Check points via mobile.
- Supervisors approve or reject data entries instantly through mobile workflow notifications.

- Geo-tagging and time-stamping ensure accuracy during offsite or outsourced operations.

8. Sampling

Web Application

- All sampling activities are performed exclusively on the Web Application for standardization.
- Sampling checks are enforced before and after every production stage including outsource, not just final products.
- Sampling management enables predictive testing by capturing sample data, batch details, and outcomes.

Mobile Application

- Mobile app access for sampling activities is restricted; all testing and COA validation occur only in the web platform.

9. Engineering Management

Web Application

- Records all assets with details like specifications, department, depreciation, and service schedules.
- Engineering Management plans preventive maintenance, calibration, and breakdown repairs using asset data.
- Automatic alerts notify when maintenance or calibration is due.

Mobile Application

- Maintenance engineers record service complaints, upload before/after images, and log completed work via mobile.
- Updates are synchronized instantly with the web ERP for centralized visibility.

10. Finished Product & Packing Process

Define the final conversion stage — Semi-Finished → Finished Product → Packed Product.

- Assign separate packing operations, including filling, labeling, and sealing.
- Record material used for packing (bottles, blister packs, labels, etc.).
- The finished product and packaging details are recorded batch-wise for traceability.
- QC checkpoints are applied before and after packaging to ensure conformity.

Mobile Application:

- Not Applicable

11. Sales Management

Web Application

- Handles Sales Order creation, approval, and tracking through to delivery.
- Manages Payment Collection and automatically updates customer ledgers.
- Tracks Pending Payments and sends reminders for overdue invoices.
- Generates essential Sales and Collection Reports integrated with Accounting.

Mobile Application

- Option to collect pending payments against invoices.

12. Accounting and Integration

Web Application

- Records all purchase, production, and expense transactions in the Accounting module.
- Integrates with Zoho Books/Finance for real-time synchronization of accounting data.
- Generates automated batch-wise costing and profitability reports.

Mobile Application

- Managers can view key financial summaries and pending transaction approvals through mobile dashboards.

13. Reporting and Synchronization

Web Application

- Provides centralized dashboards for procurement, QA, production, and costing analysis.
- Maintains digital records for QA, COA, vendor approval, and asset management for audit readiness.
- Generates regulatory and internal reports at batch or product level.

Mobile Application

- All mobile entries synchronize automatically with the web ERP database.
- Offline data syncs seamlessly once connectivity is restored, preventing data loss.

WORK FLOW

	1	2	3	4
Back end ERP Application	**Initial Setup and Module Configuration** Configure company details, departments, users, and system integrations.	**HRMS and Workforce Management** Manage employee data, attendance, shifts & manpower allocation.	**Inventory Management** Define item & raw materials, consumables, and batch-wise stock movement.	**Procurement and Vendor Approval** Approve vendors, manage purchase orders, and validate COA templates.
Mobile Application	User login securely with their assigned roles. Supervisors can view roles & responsibilities & manage checkpoint entries.	Employees mark attendance & shift details. Supervisor review & approve records.	Not Available	User mark GRN receive status.

	5	6	7	8
Back end ERP Application	**Purchase Invoice Pre-Approval & Quality Verification**: Verify vendor COA details & approve invoices before material receipt.	**Asset Management** Register, track, and maintain fixed and movable company assets.	**Production Planning, Recipe & Out Source** Plan production batches, define recipes, manage outsourcing and yield validation.	**Sampling** Conduct sampling and predictive testing at each stage for quality verification.
Mobile Application	Not Available	Scan QR code/Barcode/NFC Tag to view asset details. Upload photos or notes after completing maintenance work.	Operator enter checkpoints. Supervisors approve or reject entries. Geo-tagging & time stamp for data accuracy	Sampling access via mobile is disabled. All testing and COA validation are done only on the web platform.

	9	10	11	12
Back end ERP Application	**Engineering Management** Schedule maintenance, calibrations, & handle service logs for equipment.	**Finished Product & Packing Process** Convert semi-finished goods into final packed products with QC validation.	**Sales Management** Manage sales orders, track deliveries, and handle payment collections.	**Accounting and Integration** Record transactions, integrate with Zoho Finance, and generate costing reports.
Mobile Application	Maintenance engineers record complaints, upload photos, and log completed tasks. Data send to ERP Application	Not Available	Option to collect pending payments against invoices.	Managers view financial summaries and approve pending transactions

	13
Back end ERP Application	**Reporting and Synchronization** Provide dashboards, reports, and ensure real-time data synchronization.
Mobile Application	All Mobile data syncs automatically with the web ERP. Offline entries update automatically once the connection is restored.

7. TECHNICAL ARCHITECTURE / SYSTEM DEPLOYMENT OVERVIEW

The system will be a web-based application accessible via secure login, with real-time synchronization between the mobile app and central server. The architecture ensures reliable data flow and minimal downtime.

- Web-based ERP platform.
- Android mobile application.
- Cloud hosting.
- Hosted Database.
- Optional Integration: Zoho Books based on API conformation from Zoho.

8. DATA SECURITY AND COMPLIANCE

- User-based authentication and role-based access control.
- Data encryption both in transit and at rest.
- Regular data backups and audit trails for all transactions.
- System designed to comply with GMP (Good Manufacturing Practice) standards for data recording and traceability.

9. REPORTS AND DASHBOARDS

- Batch-wise production summary reports.
- Inventory stock and consumption reports.
- Quality testing and COA tracking reports.
- Attendance and workforce reports (HRMS).
- Financial integration and cost analysis via Zoho Books.

10. IMPLEMENTATION AND SUPPORT PLAN

- Phase 1: Requirement finalization and system design.
- Phase 2: Module development and internal testing.
- Phase 3: User training and pilot run.
- Phase 4: Go-live and maintenance.
- Post-implementation technical support and updates for a defined period.

11. THE DELIVERABLES

We will be providing the following Deliverables

- ERP Web Application
- Android Application
- The Detailed Working of the Solutions, with Document on Procedure of Working.

12. THE PRE- REQUISITES

The Pre- Requisites needed shall be

- Zoho API & conformation from Zoho
- SRS Duly Signed and Technical support for development team of Softland
- Engineers from your company for taking training for Installation, Implementations and Support.

THE COMMERCIALS

The Detailed Commercials are as below

SLNo	Particulars	Qty	Unit Price	Total	GST %	GST Amount	Grand Total
1	ERP Web Application	1					
2	Android Application	1					
3	Integration Charge						
4	One time installation Charge	1					
	Grand Total						**Rs.**

GENERAL TERMS AND CONDITIONS

- **PURCHASE ORDER : Please place the order on M/S Softland India Ltd,** Reg.Office: Kinfra Small Scale Industries Park, Menamkulam, TRIVANDRUM.
- **PRICES :** The Prices are Exclusive of Taxes, Duties Etc.
- **DELIVERY:** The Lead Time will be about 6 to 8 weeks from the Confirmed Purchase Order & Advance.
- **PAYMENT TERMS::**

  100% Advance Payment with Order.
- **WARRANTY:** 12 Months from the Date of Supply. Breakages will not be covered under warranty.
- **VALIDITY OF THE OFFER:** This Quotation is valid for 1 Month from the date of issue.
- **INSTALLATION:** Installation of the Solution will be our responsibility. Installation and Implementation of Solution will be done by our Team based and the Training for the day to day operations will be Provided by us.
- **TRAINING:** All the required Training for using the Solution will be provided by our team at your Site. It will be the responsibility of your Team to provide the Training to the users for one time.
- **SERVICE AND SUPPORT:** The Service and Support during Warranty period Support are back to back and will be Online for any Queries. In case of any emergencies or Faults, our Trivandrum Head Office or any nearby Branch Office will attend the same Online or at site.
- **BANK CHARGES:** The Charges for the Bank for the Payment of TT will have to be provided Extra.

Thanking you and Best Regards

For Softland India Limited

K.Vinod,

Executive Director
